PATENT Conf. No.: 2771

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) An integrated circuit (IC), including circuitry arranged in an array having a plurality of rows and a plurality of columns, wherein each row of the plurality of rows begins at a first side of the IC and ends at a second side of the IC, and each column of the plurality of columns begins at a third side of the IC and ends at a fourth side of the IC, the IC comprising:

a column of the plurality of columns comprising a plurality of circuit elements of a circuit type substantially occupying the column; and

a row of the plurality of rows positioned at the third side of the IC, wherein a number of circuit elements of an input and output circuit type in the row is less than a number of remaining circuit elements of other circuit types in the row; and

wherein there does not exist a perimeter input/output (I/O) ring
a configuration column comprising configuration logic for configuring the
column of the plurality of columns.

- 2. (Original) The integrated circuit of claim 1 wherein the circuit type is selected from a group consisting of a Configurable Logic Block (CLB) type, a Multi-Giga Bit Transceiver (MGT) type, a Block Random Access Memory (BRAM) type, a Digital Signal Processor (DSP) circuit type, a multiplier circuit type, an arithmetic circuit type, an Input/Output Interconnect (IOI) circuit type, an Input/Output Block (IOB) type, and an application specific circuit type.
- 3. (Currently Amended) The integrated circuit of claim 1 wherein the input and output circuit type is an Input/Output Block (IOB) type, the IOB configured to input or output data signals into or out of the IC.
- 4. (Original) The integrated circuit of claim 1 wherein the input and output circuit type includes an Input/Output Block type and a Multi-Giga Bit Transceiver type.

X-1392-1P US PATENT 10/683,944 Conf. No.: 2771

5. (Original) The integrated circuit of claim 1 further comprising a center column comprising configuration logic.

- 6. (Original) The integrated circuit of claim 3 wherein the center column is positioned on or near the center axis of the IC.
- 7. (Original) The integrated circuit of claim 4 further comprising a clock column adjacent to the center column.
- 8. (Original) The integrated circuit of claim 1 wherein the column of the plurality of columns further comprises a spacer tile and a clock tile.
- 9. (Original) The integrated circuit of claim 1 further comprising an embedded processor.
- 10. (Currently Amended) An integrated circuit (IC) comprising circuitry having programmable functions and programmable interconnects, the IC further comprising:

a plurality of homogeneous columns and

wherein each of the homogeneous columns starts at one side of the IC and ends at an opposite side of the IC, and

wherein a first column of the plurality of homogeneous columns comprises a first set of substantially identical circuit elements of a first circuit type substantially filling the first column; and

wherein when the circuit elements of the first set comprise logic blocks there is no input/output block between the end of the first column and the side of the IC a heterogeneous column having configuration logic and a clock management circuit element.

11. (Original) The integrated circuit of claim 10:

wherein a second column of the plurality of homogeneous columns comprises a second set of substantially identical circuit elements of a second circuit

X-1392-1P US PATENT 10/683,944 Conf. No.: 2771

type substantially filling the second column, and

wherein a third column of the plurality of homogeneous columns comprises a third set of substantially identical circuit elements of a third circuit type substantially filling the third column.

- 12. (Currently Amended) The integrated circuit of claim 10 further comprising a wherein the heterogeneous center column having configuration logic, a clock management circuit element further comprises an input/output block.
- 13. (Original) The integrated circuit of claim 10 wherein the first circuit type is selected from a group consisting of a Configurable Logic Block (CLB) type, a Multi-Giga Bit Transceiver (MGT) type, a Block Random Access Memory (BRAM) type, a fixed logic type, an Input/Output Interconnect (IOI) circuit type, and an Input/Output Block (IOB) type.
- 14. (Original) The integrated circuit of claim 13 wherein the fixed logic type comprises a Digital Signal Processor (DSP) circuit type, a multiplier circuit type, an arithmetic circuit type, and an application specific circuit type.
- 15. (Original) The integrated circuit (IC) of claim 10 wherein the integrated circuit further comprises a field programmable gate array (FPGA).
- 16. (Original) The integrated circuit (IC) of claim 10 wherein the integrated circuit further comprises a programmable logic device (PLD).

Claims 17-23 (Cancelled)

24. (Currently Amended) An integrated circuit (IC) comprising:

a heterogeneous center column having configuration logic, a clock

management circuit element, and an input/output block;

a plurality of columns and

PATENT Conf. No.: 2771

X-1392-1P US 10/683,944

wherein each of the columns starts at one side of the IC and ends at an opposite side of the IC,

wherein a first column of the plurality of columns comprises a first set of substantially identical circuit elements of a first circuit type substantially filling the first column,

wherein when the first circuit type comprises logic blocks, the first column does not have an input/output block at an end of the first column, and

wherein a second column of the plurality of columns comprises a second set of substantially identical circuit elements of a second circuit type substantially filling the second column, and

wherein a third column of the plurality of columns comprises a third set of substantially identical circuit elements of a third circuit type substantially filling the third column.

- 25. (Original) The integrated circuit of claim 24 further comprising circuitry having programmable functions and programmable interconnects.
- 26. (Currently Amended) The integrated circuit of claim 25 wherein the first, and second, and third circuit types have a circuit type selected from a group consisting of a Configurable Logic Block (CLB) type, a Multi-Giga Bit Transceiver (MGT) type, a Block Random Access Memory (BRAM) type, a Digital Signal Processor (DSP) circuit type, a multiplier circuit type, an arithmetic circuit type, an Input/Output Interconnect (IOI) circuit type, an Input/Output Block (IOB) type, and an application specific circuit type.

Claim 27. (Cancelled)

- 28. (Original) The integrated circuit of claim 24 wherein the substantially identical circuit elements are substantially identical tiles.
- 29. (Original) The integrated circuit of claim 28 wherein each tile comprises a functional element coupled to a switch matrix.

X-1392-1P US PATENT 10/683,944 Conf. No.: 2771

Claims 30-33. (Cancelled)

34. (Previously Presented) An integrated circuit (IC) comprising circuitry having programmable functions and programmable interconnects, the IC further comprising:

a heterogeneous center column having configuration logic, a clock management circuit element, and an input/output block;

a plurality of homogeneous columns and

wherein each of the homogeneous columns starts at one side of the IC and ends at an opposite side of the IC, and

wherein a first column of the plurality of homogeneous columns comprises a first set of substantially identical circuit elements of a first circuit type substantially filling the first column.
